DETAILED ACTION

Election/Restrictions

Applicant's election of the invention of Group I, claims 1-23 and the specie, 5-(2'-thioxospiro[cyclohexane-1,3'-[3H]indol]-5'-yl)-1-methyl-pyrrole-2-carbonitrile, in the reply filed on July 26, 2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 24-43 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on July 26, 2006.

Claims 8, 10-11, 15-23 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected specie, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on July 26, 2006.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-7, 9, 12-14 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for the Selective estrogen receptor modulators (SERM) disclosed in the specification page 21, does not reasonably provide enablement for other suitable SERMs. The specification does not enable any person

Application/Control Number: 10/601,438

Art Unit: 1617

skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims. In the instant case, the specification fails to provide information that would allow the skilled artisan to practice the instant invention without undue experimentation. Attention is directed to *In re Wands*, 8 USPQ2d 1400 (CAFC 1988) at 1404 where the court set forth the eight factors to consider when assessing if a disclosure would have required undue experimentation. Citing *Ex parte Forman*, 230 USPQ 546 (BdApls 1986) at 547 the court recited eight factors:

- 1) the quantity of experimentation necessary,
- 2) the amount of direction or guidance provided,
- 3) the presence of absence of working examples,
- 4) the nature of the invention,
- 5) the state of the prior art,
- 6) the relative skill of those in the art
- 7) the predictability of the art, and
- 8) the breadth of the claims.

The claims are so broad that they encompass any and all kinds of SERMs. Applicant fails to set forth the criteria that define a "SERM". It is known in the art that SERM can act as agonists and antagonists at different tissue sites. However, it is not known what structural-activity relationship that would make SERM to be acting in one way in one kind of tissue and acting completely opposite in other kinds of tissue. Additionally, Applicant fails to provide information allowing the skilled artisan to

Page 3

Application/Control Number: 10/601,438 Page 4

Art Unit: 1617

ascertain these compounds without undue experimentation. In the instant case, only a limited number of "SERMs" examples are listed in the specification but there is no working example incorporating the SERMs listed. Without sufficient guidance disclosed in the instant specification, one of skilled in the art would be required to assess each embodiment individually for physiological activity in order to practice the full scope of the invention. The instant claims read on all "SERM", necessitating an exhaustive search for the embodiments suitable to practice the claimed invention. Applicants fail to provide information sufficient to practice the claimed invention, absent undue experimentation.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 10/601,438

Art Unit: 1617

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-7, 9, and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent 6,355,648 ('648) and US 6,331,562 ('562).

'648 teaches the elected compound and the compounds of formula (I) as useful in inducing contraception (See claims 1-10, 29 and 57, for example).

'562 teaches the compounds taught therein, which are SERMs, as useful in oral contraception (See col. 21, lines 62-63 for example).

The references do not expressly teach the compounds of formula (I) combining with compounds of '562 in a method of inducing contraception.

It would have been obvious to one of ordinary skill in the art at the time of invention to employ both the compounds of '648 and that of '562 in a method of inducing contraception.

One of ordinary skill in the art would have been motivated to employ both the compounds of '648 and that of '562 in a method of inducing contraception.

Concomitantly employing two agents, which are known to be useful for contraception

Application/Control Number: 10/601,438

Art Unit: 1617

Page 6

individually, in a method useful for the very same purpose is *prima facie* obvious (See *In re Kerkhoven* 205 USPQ 1069).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to San-ming Hui whose telephone number is (571) 272-0626. The examiner can normally be reached on Mon 9:00 to 1:00, Tu - Fri from 9:00 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sreeni Padmanabhan, PhD., can be reached on (571) 272-0629. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
